Subject: Microsoft Settlement

In my opinion the suit against Microsoft should never have been filed by the DOJ to begin with. It is time to stop it and the settlement should be approved and the Court should force all states and persons to abide by it. Let s stop allowing the incapable ones to enter a field about which they are not sufficiently informed and capable by screaming false accusations. End user consumers have been greatly harmed by the suit already and in fact will continue to be harmed by the suit and the limitations and regulations imposed by the settlement. However better that we at least stop further blood-letting and force the competitors to find their place in the market on the merit of their products and not on the basis of politics.
